

JavaScript

- ↳ Synchronous → one code at a time
- ↳ Single threaded language

Default

Execution Context

Blocking Code vs Non-Blocking Code

↓
Block the flow of program
↓
Read File Sync

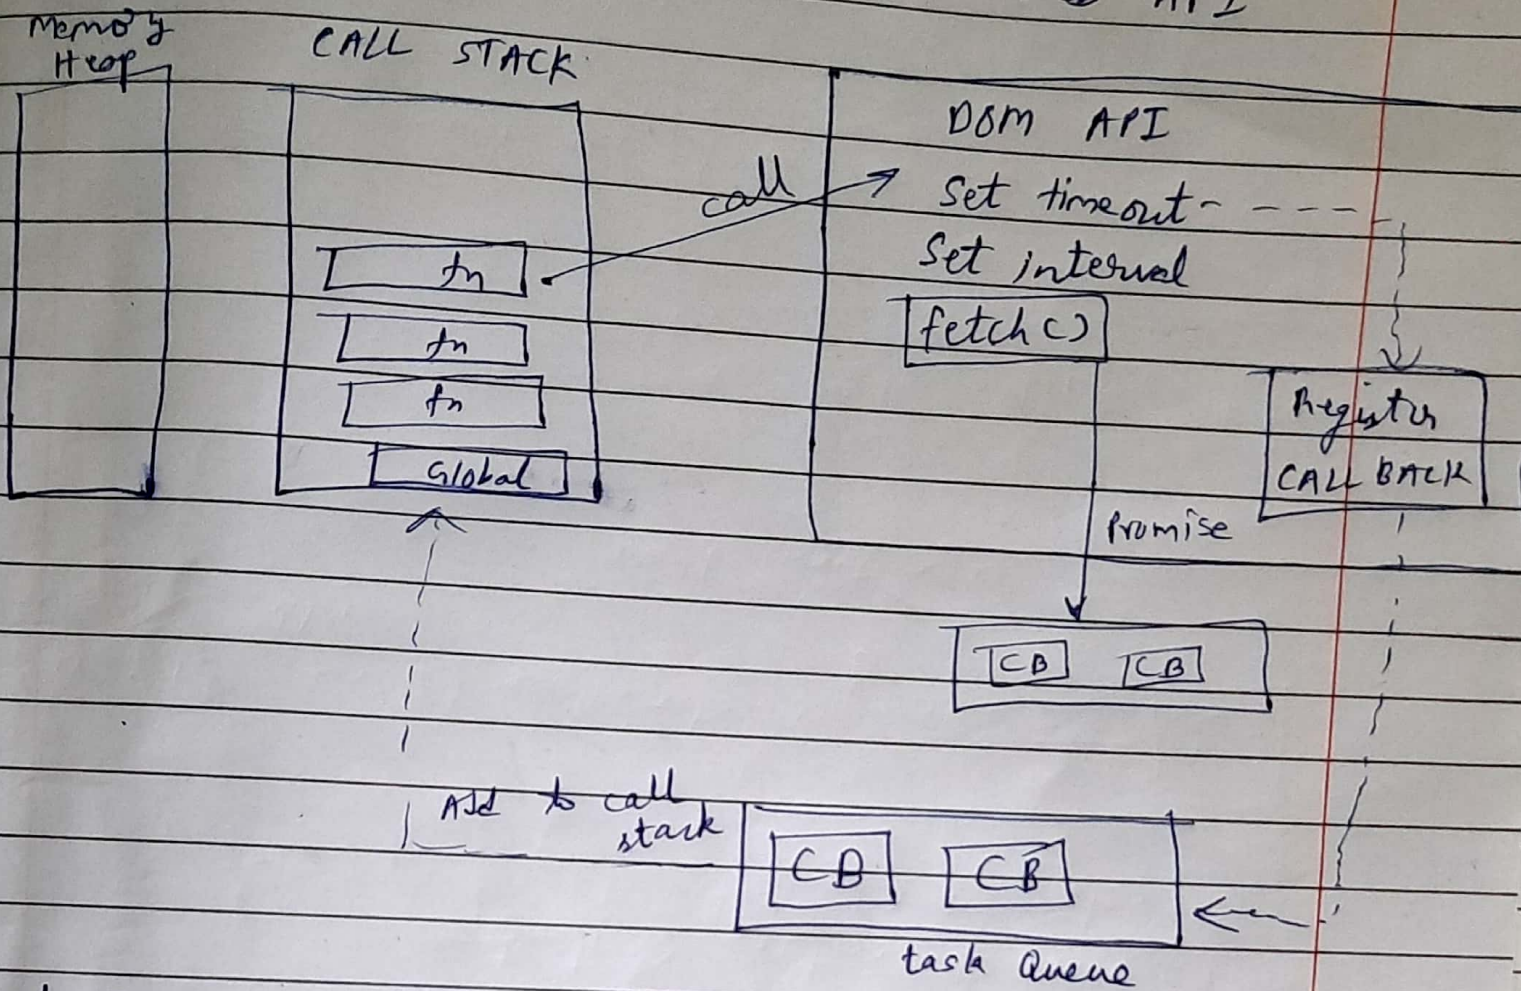

↓
Doesn't block execution
↓
Read File Async

Kernel is eligible to access and read file I/O at same time.

Do the work and use case (register to bank id, drink water and stop other work,

JS Engine

Web API

task Queue → makes JS fast and asynchronous

→ its job is to add the CB to call stack

Register CALL BACK → job to add CB to ^{task} queue

eg: set timeout = 0

$$\begin{matrix} 1 \\ \boxed{0, 2} \\ 3 \end{matrix} \rightarrow \text{this goes through call back}$$

print 1, 3, 2
